

## Annex IV

### Ape population abundance estimates

In this annex, ape abundance estimates are presented at site level, where “site” is a protected area and its buffer zone, or a logging concession or group of concessions, or any discrete area where a survey has taken place in the last two decades (a few sites were last surveyed in the 1980s). Most of the abundance estimates presented come from documented material (both peer-reviewed publications and gray literature); some have been reconfirmed by experts in the field. Records of absolute ape numbers rarely exist; therefore, providing absolute figures in this report would be misleading. Instead, abundance classes covering a population range are given unless otherwise stated (for example, actual estimates for orangutan populations are taken from Wich *et al.*, 2008). Abundance classes are defined in Table 1. The list of ape sites in these tables is not in any way exhaustive and updates (to both sites and survey data) will be made available in digital format via the A.P.E.S. Portal (<http://apesportal.eva.mpg.de>).

**TABLE 1**

**Abundance class definitions**

Abundance class	Class definition
<50	<50 individuals
50–100	50–100 individuals
100–300	101–300 individuals
300–500	301–500 individuals
500–1000	501–1000 individuals
1000–5000	1001–5000 individuals
5000–10000	5001–10000 individuals
>10000	>10000 individuals
Present	Confirmed present, total population not estimated
Extirpated	Population “possibly extinct” (IUCN, 2013) or extirpated locally
?	Confirmation needed or precise information not available*

\* Where there is a “?” and a source, this indicates there has been some preliminary study that indicates there may be apes present but this has not been confirmed. Where there is a “?” but no source, this indicates an assumption that apes may be present.

Acronyms used in the tables of abundance estimates:

CAR	Central African Republic
DRC	Democratic Republic of Congo
Lao PDR	Lao People’s Democratic Republic
NP	National Park
NPA	National Protected Area
